6 Hour Race Results Notes:

The distance sailed into the last lap of the day was calculated from: the time rounding the scoring mark giving a duration (minutes) on the final lap, and a proportion of lap completed determined from an average of completed lap durations between 3pm and 4pm.

The handicap result for the trailer yachts is a little contentious because Mike A's Caribou 17 was sailed with a modified rig giving it a better performance than for a standard Caribou 17 which has a handicap of 0.68 (and at 0.68 Mike would have topped the handicap standings).

In the dinghies section, well done Mike M in taking out the race win on handicap. Jack only sailed part of the day and following a swim Danny retired short of the 6 hour mark... too cold to continue.

Note trailer yacht handicaps and dinghy handicaps are not on a comparable scale.

I had my GPS recording again; I sailed 58km with average moving speed of 9.7km/hr and a top speed burst of 20km/hr. Certainly up there with other windy 6 hour races; 63km in April 2013 and 59km in April 2017.
